Step 1

In the Network Connections window open the New Connection Wizard
Step 2

Select an option to Setup an advanced connection as Network Connection Type.
Step 3

- Accept Incoming Connections option and click Next.
Step 4

On the Devices For Incoming Connections, you can select optional devices on which you want to accept incoming connections.
Step 5

On the Incoming Virtual Private Network (VPN) Connection, select the Allow Virtual Private Connections option and click Next.
Step 6

On the User Permissions page, select the users that are allowed to make incoming VPN connections. Click Next.
Step 7

On the Networking Software page, click on the Internet Protocol (TCP/IP) entry and click the Properties button.
Step 8

On the Completing The New Connection Wizard page, click Finish to create the connection.
Step 9

After the Incoming Connection is complete, right-click on the connection in the Network Connections window and select the Properties command.
Step 10

Here you can make changes to your properties.
